   Sequence 3, Application US/09193562D

Patent No. 6309857

GENERAL INFORMATION:

APPLICATY: Pauli, Benedicht U.

TITLE OF INVENTION: Nucleotide Sequences Encoding Mammalian Calcium

TITLE OF INVENTION: Activated Chloride Channel-Adhesion Molecules

TITLE REFERENCE: 18617.0052

CURRENT PAPLICATION NUMBER: US/09/193,562D

CURRENT FILING DATE: 1998-11-17

PRIOR APPLICATION NUMBER: US/60/065,922

NUMBER OF SEQ ID NOS: 47

SEQ ID NO 3

LENGTH: 203
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     33 ATTAATCTGACTTGGACAGCTCCTGGGGATGATTATGACCATGGAACAGCTCACAAGTAT

Patent No. 6309857

GERREAL INFORMATION:

APPLICANT: Pauli, Benedicht U.

TITLE OF INVENTION: Nucleotide Sequences Encoding Mammalian Calcium

TITLE OF INVENTION: Activated Chloride Channel-Adhesion Molecules

FILE REFERENCE: 18617.0052

CURRENT APPLICATION NUMBER: US/09/193,562D

CURRENT APPLICATION NUMBER: US/60/065,922

PRIOR PILING DATE: 1997-11-17

PRIOR FILING DATE: 1997-11-17

SEQ ID NO 34

LENGTH: 902

Patent No. 6309857
GENERAL INFORMATION:
APPLICANT: Pauli, Benedicht U.
TITLE OF INVENTION: Nuclectide Sequences Encoding Mammalian Calcium
TITLE OF INVENTION: Activated Chloride Channel-Adhesion Molecules
FILE REFERENCE: 18617.0052
CURRENT FILING DATE: 1998-11-17
PRIOR PPLIATION NUMBER: US/09/193,562D
PRIOR APPLICATION NUMBER: US/09/065,922
PRIOR PLING DATE: 1997-11-17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  APPLICANT: Henderson, Robert A.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 33, Application US/09193562D
Patent No. 6309657
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: Nucleotide Sequences Encoding Mammalian Calcium
TITLE OF INVENTION: Activated Chloride Channel-Adhesion Molecules
FILE REFERENCE: 18617.0052
CURRENT APPLICATION NUMBER: US/09/193,562D
CURRENT FILING DATE: 1998-11-17
PRIOR APPLICATION NUMBER: US/60/065,922
PRIOR FILING DATE: 1997-11-17

Patent No. US20020168711A1

GENERAL INFORMATION:

APPLICANT: Rosen et al.

TITLE OF INVENTION: Nucleic Acids, Proteins, and Antibodies

TITLE OF INVENTION: Nucleic Acids, Proteins, and Antibodies

CURRENT APPLICATION NUMBER: US/09/764,868

CURRENT PILING DATE: 2001-01-17

PATOT APPLICATION 05: 1510

NUMBER OF SEQ ID NOS: 1510

SOFTWARE: Patentin Ver. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             914

Sequence 27, Application US/09193562D

Parent No. 6309857

GENERAL INFORMATION:

APPLICANT Paull, Benedicht U.

TITLE OF INVENTION: Nucleotide Sequences Encoding Mammalian Calcium

TITLE OF INVENTION: Activated Chloride Channel-Adhesion Molecules

FILE REFERENCE: 18617.0052

CURRENT PAPLICATION NUMBER: US/09/193,562D

CURRENT FILING DATE: 1998-11-17

PRIOR APPLICATION NUMBER: US/60/065,922

NUMBER OF SEQ ID NOS: 47

SEQ ID NO 27

LENGTH: 3007

Patent No. 6576434

GENERAL INFORMATION:
ABAPLICANT: Magainin Pharmaceuticals, Inc.
TITLE OF INVENTION: Asthma-Associated Factors as Targets for Treating
TITLE OF INVENTION: Atopic Allergies, Including Asthma and Related
TITLE OF INVENTION: Disorders
FILE REFERENCE: 36870-5073-WO
CURRENT APPLICATION NUMBER: US/09/623,624

CURRENT FILING DATE: 2000-09-06

PRIOR FILING DATE: 1999-03-03
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

Patent No. 6284241

GENERAL INFORMATION:

APPLICANT: Xu, Jangchun

TITLE OF INVENTION: COMPOUNDS AND METHODS FOR THERAPY AND DIAGNOSIS

TITLE OF INVENTION: OF COLON CANCER

FILE REFERENCE: 210121, 471

CURRENT APPLICATION NUMBER: US/09/221,298

CURRENT FILING DATE: 1998-12-23

NUMBER OF SEQ ID NOS: 112

SOFTWARE: FastSEQ for Windows Version 3.0

SEQ ID NO 34

LENGTH: 401

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

GENERAL INFORMATION:

TITLE OF INVENTION: Nuclectide Sequences Encoding Mammalian Calcium

TITLE OF INVENTION: Activated Chloride Channel-Adhesion Molecules

TITLE OF INVENTION: Activated Chloride Channel-Adhesion Molecules

FILE REFERENCE: 1867.0052

CURRENT APPLICATION NUMBER: US/60/065,922

FRIOR APPLICATION NUMBER: US/60/065,922

PRIOR APPLICATION NUMBER: US/60/065,922

NUMBER OF SEQ ID NOS: 47

SEQ ID NO 46

LENGTH: 903

TYPE: PRT

ORGANISM: Unknown

FRATURE:

OTHER INFORMATION: Calcium sensitive chloride channel from bovine tracheal

Patent No. 6309857

FIREMSAL INFORMATION:

APPLICANT: Pauli, Benedicht U.

TITLE OF INVENTION: Activated Chloride Channel-Adhesion Molecules
FILE REFERENCE: 18617.0052

CURRENT PALLICATION NUMBER: US/09/193,562D

CURRENT APPLICATION NUMBER: US/06/065,922

PRIOR PILING DATE: 1998-11-17

FRIOR PILING DATE: 1997-11-17

SEQ ID NO 34

LENGTH: 902
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GCTGATGTTCTGGTTGCTGAGTCTACTCCTCCAGGTAATGATGAACCCTACACTGAGCAG
